

### Q3

Can I use a garbage disposal unit?

### A3

Please use a garbage disposal unit that has met certain requirements.

A disposer that meets the requirements is a “disposer wastewater treatment system” certified by the Japan Sewage Works Association.

A disposal drainage processing system grinds up kitchen waste and, after treating it in the drainage processing apparatus, drains it with dishwater into the sewer system. It is a piece of equipment designed to reduce human-induced burdens on the environment.

Refrain from using a disposal unit unequipped with a drainage processor, or the ground-up vegetable scraps and other kitchen waste will flow into the sewer system, and may result in clogging drainpipes and/or contaminating rivers and oceans.

A notification is necessary for a new installation of drainage equipment.

Furthermore, appropriate maintenance is required to keep a disposal drainage processing system functioning correctly.

So, please submit a maintenance plan related to the disposal drainage processing system to the Sewerage Office.

※ Your notification will be accepted at the customer service division of each Sewerage Office (See the back cover).

**There are two types of disposal drainage processing systems.**

**Biological treatment type**

**Machine treatment type**
