

Q3

Can I use a garbage disposal unit?

A3

Please use a garbage disposal unit that has met certain requirements.

A garbage disposal unit that has met the desired requirements is the one called a “disposal drainage processing system” that is complete with a drainage processor. A disposal drainage processing system grinds up kitchen waste and, after treating it in the drainage processing apparatus, drains it with dishwater into the sewer system. It is a piece of equipment designed to reduce human-induced burdens on the environment.

Refrain from using a disposal unit unequipped with a drainage processor, or the ground-up vegetable scraps and other kitchen waste will flow into the sewer system, and may result in clogging drainpipes and/or contaminating rivers and oceans.

A notification is necessary for a new installation of drainage equipment.

Furthermore, appropriate maintenance is required to keep a disposal drainage processing system functioning correctly.

So, please submit a maintenance plan related to the disposal drainage processing system to the Sewerage Office.

※ Your notification will be accepted at the customer service division of each Sewerage Office (See the back cover).

There are two types of disposal drainage processing systems.

Biological treatment type

Machine treatment type
