

Q5

The toilet clogged.
What should I do?

A5

Try using a rubber cup plunger.

First use rubber gloves to directly remove any visible obstruction from the toilet drain, then try using a commercially available rubber-cup plunger. Using more toilet paper than is necessary can cause your toilet to clog. Additionally, please do not flush diapers or other insoluble materials such as tissues and plastics.

Use a rubber-cup plunger
when your toilet is clogged.

If the blockage persists after attempting the above method, please consult with an Everything Drainage Consultation Center (p.32).
